

New - Patented Wireless Remote Controlled Water Security System

Wireless On-Off Switch Pad

**International Builders' Show®-Booth 12555 South Hall
February 13th-16th 2008, Orlando, FL**

FOR IMMEDIATE RELEASE

“Protect Property from Water Damage” with FLO n STOP™

January 4, 2008 Boca Raton, FL – A new Wireless Remote Controlled Water Security System developed by Millennium International Development Corporation, will be presented for the first time at The International Builders' Show, Booth S 12555, South Hall on February 13th to 16th at The Orange County Convention Center in Orlando, FL.

When activated, FLO n STOP will prevent water damage and mold to property. The patented FLO n STOP™ system is easy to use...just touch the OFF button by your entry door when leaving and water pressure to all plumbing fixtures will be SHUT OFF. Upon returning, push the ON button, and all water will be restored.

How it works: A Solenoid Valve is plumbed into the water supply line just after the main shut off valve. The valve is plugged into a nearby 110-120VAC Transceiver Module. Insert 4-AAA batteries into the Wireless Transmitter ON/OFF switch pad. Place the switch pad near or onto the entry door just above the locking device. It's now ready to operate and provide positive protection.

FLO n STOP provides a convenient way to easily turn off the main water supply line when leaving home. Turning off the main water supply line in the dwelling will prevent uncontrollable water damage from bursting hoses or ruptured pipes while the home is unattended.

FLO n STOP is designed for both single homes and can be programmed for multi-family and condominiums with over 250 units in a building, to assure that each dwelling has its' own exclusive unit code.

FLO n STOP also provides an added level of security with the “24/7 Water Sentinel” that can be placed on the floor at every location where a water fixture is installed. The “24/7 Water Sentinel” senses the presence of water and immediately transmits a wireless signal that SHUTS-OFF the main water supply to the dwelling, day or night.

Millennium International Development Corporation is a U.S. based company specializing in products with practical home improvement applications. Headquartered in Boca Raton, Florida, Millennium has successfully manufactured innovative products for the past seven years and has distribution nationally and internationally.
